**PERFO installation on runway, taxiways and parking area  
2008-2009**

*"As chairman of the St. Pölten Flying Club, I can only give a positive report on the upgrading of our airfield with the PERFO-matting. Since our airfield was always damp and wet, runway conditions/take-off distance had always been a problem due to the sometimes very soft ground. Furthermore, the numerous mole hills on the runway meant that it was not exactly the most popular in the region among pilots. In addition, the aircraft instruments (such as artificial horizon) suffered as a result of the uneven conditions. This has been fundamentally changed as a result of the upgrade. The number of flyable days has increased greatly and we always use the runway, except when it's snowing. This also helps the club ensure its aircraft are flying sufficient hours. All in all, we feel it was a very sensible investment which not only helps the club to be financially more sustainable, but also significantly increases safety."*

DI(FH) Rainer Handfinger  
(Chairman)

*"At Völtendorf we are very satisfied with the installed PERFO tiles. The usability of the airfield has increased significantly, especially after heavy rain. Hardly any puddles remain and mowing and general maintenance (e.g. rolling in the Spring) is very simple. Another big advantage is that voles and moles do not burrow under the PERFO-mats."*

Alois Sulzbacher  
(Betriebsleiter)

**Compton Abbas Airfield Limited (Licenced)**

**PERFO installations on runway and taxiways in 2001**

*"For me the worst thing was having a major problem with boggy surface conditions and not knowing which product was actually going to work and satisfy the CAA airfield inspectors too. Fortunately I was able to satisfy all the criteria by installing the PERFO ground reinforcement system. We were the first UK licenced airfield to use it, and as a licensee I can without reservation wholeheartedly commend this product to anyone wanting a permanent solution to soft ground conditions."*

Clive Hughes  
Licensee and Managing Director

**PERFO installations on runway and taxiways since 2002**

*"We are happy to provide a reference. We have been using the PERFO-system for over 10 years and carry out approx. 25,000 flight movements per year on the tiles and have very positive experience with them"*

Frau Pascale Kummer  
Club Secretary

**PERFO installation on runway and taxiways with PERFO marker tiles for the centre-line. Installed in 2011**

*"The pilots are overjoyed with the new PERFO runway...it almost feels like the runway at a big airport. Larger aircraft up to 5.7 tonnes can now land here"*

Theo Budde  
(Project Manager)

*"After 1 ½ years of operations since installation we have not regretted the decision to opt for the PERFO solution for even a moment. The runway feels smooth and even like a hard runway, without having lost the feel of a 'gentler' grass runway on landing. It reduces wear and tear on our aircraft and sensitive avionics and has increased the safety of the airfield. Cloppenburg Aeroclub would not hesitate to choose PERFO again and invites all interested pilots to come and experience our excellent runway for themselves"*

Lothar Koopmeiners (Committee Member, LSV Cloppenburg)

*"Thanks to the centre-line (PERFO marker tiles), the runway is clearly visible from quite a distance – really quite like an airport"*

Reiner Kramer  
(Nordwestzeitung)
